

A drop makes the difference

Saving water in the shower has become easier with the Drop showerhead.

Paco Jaanson has introduced an eco-friendly product for the bathroom, the Drop showerhead. Designed by Italian industrial designer Giulio Iacchetti, Drop's profile was inspired by the shape of a water drop.

The showerhead is made of silicone, an eco-friendly material that is recyclable and available in several colours. Silicone has a thermal stability of up to 250 degrees and it has a high resistance to oxygen, ozone and sunlight, making the shower not only suitable in bathrooms, but for the outdoors as well. It is a flexible material that is non-stick and does not allow for lime deposits to build up. It also has no toxicity and low chemical reactivity.

The Paco Jaanson product comes with a flow restrictor already installed, limiting the flow rate to 7.5 litres per minute.

Drop's profile was inspired by the shape of a water drop.
